

Ball Valve INTEC K200-S-STD-EC

Ball valve whose stem seal is realized by a bellows and downstream safety stuffing box

In fact, with this unique design, the metallic bellows seal outward in a technically tight manner, even though it is doing a 90° movement for actuation. The bellows execute only one stroke.

- » Reliable in the long term, technically tight
- » Meets the highest tightness requirements
- » TA-Luft and emission conform to VDI 2440
- » Use in applications with highly toxic media

Nominal size:
 Design pressure:
 Temperature range:

DN15 up to DN100
 PN16 up to PN40
 -10°C up to +220°C

NPS½" up to NPS4"
 Class150 up to Class300
 -10°C up to +220°C
